At Ambient we provide one complete solution for all I.T. and Telecommunications needs. For the end user this means that if you have any problems to do with I.T. within your company we're just a call away. We guarantee a rapid response time of as little as 30 minutes on all requests.

Most of your problems can be fixed remotely because we will setup a remote link direct to our support staff, ensuring that the majority of faults are fixed on the spot. If we are unable to fix your problem remotely we will send a engineer to your site. We run routine checks

on systems and servers to prevent any problems before they arise.

This system is being used by the majority of our clients and it's a very good way to do business. Ambient is like having your own I.T. department just one phone call away.

In addition to maintenance, we can supply and support any other equipment you may require.

Keeping all your I.T. fully working and under control - so you can do what you do best and let Ambient do the rest.

Give us a call now and we will see how we can help save you money.
